Lab 9 Explanation:

1) Make all the designs you see below (both JTabbedPane and JMenuBar) only through the interface.
2) When the ENTER button is clicked on the JTabbedPane Login page, if the username and password entered by the user are correct, make the coding that will direct the user to the Home page.
3) When the GO to JMENUBAR button is clicked, write the code that will open the interface you created for JMenuBar.
4) In the JMenuBar class, make the coding that will perform the necessary operations for the relevant MenuItems of the menus. (cut, copy, paste)

Note: The images you use may change, but the basic structure should remain the same.
